Part I. Introduction

The present contribution provides an index in which are listed alphabetically the geographical names associated with the State of Nevada, and which furnishes at the same time a means for the ready location of the places involved. The list includes not only names which appear on current maps, both published and unpublished, but also those names which appear on older maps but are now obsolete or nearly so, and certain designations which may be or have been mistaken for, or used as, place names. There are also several hundred names which do not appear on any maps which have come to our attention, but which are used by botanists or other persons in publication or elsewhere. The principal sources of data are the following:

1. The maps, 102 in number, listed below.

2. Field notes and collection data accumulated from 1937 to 1941 by the Division of Plant Exploration and Introduction, in collaboration with the Nevada Work Projects Administration and the University of Nevada. Copies of these notes are on file in the Division of Plant Exploration and Introduction.

3. A series of letters, now in the files of the Division of Plant Exploration and Introduction, written to Dr. F. V. Coville by Mr. Ivar Tidestrom while the latter was travelling in Nevada in 1919.

4. A 52-page manuscript entitled "An Account of the Botanical

Collecting of Marcus E. Jones during the years 1875 to 1919", written by Jones himself, a copy of which is in the library of the Smithsonian Institution.

5. Herbarium specimens from Nevada and monographs dealing with Nevada plants.

The following list is included among the Contributions toward a Flora of Nevada as an aid to systematic botanists who are concerned with the plants of the State, and who need to be able to locate quickly and readily the places where plants have been collected. Plant collectors are prone to visit out-of-the-way and little known spots, and are notoriously careless in their designations of localities. As a result, botanists of later generations often find it impossible to establish the positions of these obscure localities, even with the aid of standard gazetteers, postal guides, and generally available current maps. While detailed historical gazetteers have been compiled for some few areas, there appears to be no such general work covering Nevada, and this index has been prepared in the hope that it will serve its purpose until the publication of an authoritative guide at the hands of a geographer.

Almost no attempt has been made to give the "synonymy" of place names, or to decide upon the validity of any given name. Names have not been cross-indexed except where equivalence is obvious. In a relatively few cases names are definitely stated to be synonymous with others which are in current use; for example, Lake Tahoe, a conspicuous natural feature of western Nevada, appears on some early

maps as Bigler Lake. Here we have no hesitation in stating that the two are identical. In many other cases, however, where similar but slightly different names appear on different maps in approximately the same locality, we have included all the variants without any indication of their relationships to each other. Thus "Frenchman" and "Frenchmans Sta." may or may not represent the same spot on the earth's surface, and it is usually impossible to determine the facts in cases of this sort, even after considerable local research. The situation is further complicated by the fact that a single town or settlement may have at one time three valid names. One name is often that by which the locality is generally known, a second is that used by the Post Office Department, and a third is that used by the railroad.

Although Nevada is the most sparsely populated state in the Union and has been settled by white men scarcely more than a century, the number of geographical names associated with the area is surprisingly large. Certain factors seem to have contributed to this end, in particular the very temporary nature of many of the settlements and the sparsity and transient nature of the population. A large number of towns have been dependent upon mines and mineral deposits for their existence and have been abandoned upon the exhaustion of the minerals; such towns are often omitted from modern maps. Secondly, in a state like Nevada, large in area but supporting a small population, ranches, buttes, springs, trails, and other minor features often become important landmarks. These frequently

appear on maps, designated by a personal name which is usually that of the owner or inhabitant of the locality in question. As ownership and habitation change with the passage of time the names of these minor geographical features change also. Chiatovich Ranch, for example, has in recent years become Kellogg Ranch; Chiatovich Creek, which was doubtless named at the same time as the ranch and for the same reason, may or may not suffer a name-change. Such name-changes occur in any area, but from our standpoint they are particularly important in Nevada where ranches and personally owned areas may be the sole means of locating the spots where plant-collecting has been done. Throughout the following list the word "town" has been used to designate places which are named for natural features and might otherwise (in the index) be mistaken for the natural features themselves. An example of this is Gold Mountain, in Esmeralda County, near the mountain of the same name. Although called "towns" for purposes of this index, it should be pointed out that many such names represent in reality a single house, ranch, or filling-station; some of them appear on maps only because of their value as landmarks in a large and little-inhabited country.

The present contribution does not pretend to be an exhaustive one. The 102 maps which have been examined represent but a fraction of the number of existing maps of Nevada. Throughout the work of indexing we found that names not previously listed appeared on every map examined. While additional work would doubtless add many

names to the list, we feel that the project is now approaching the point at which additional studies should take the line of correlating names in current use with those formerly used, and should aim at the completion of a real gazetteer.

We are happy to express our appreciation to the Library of the United States Department of Agriculture, to the Library of Congress, and to the other Government agencies through whose kindness we have been able to locate and use the maps upon which this list is largely based.

Part II. Explanation of the Index

The geographical names listed below are arranged alphabetically and may be located as follows:

1. By a "quadrangle" number which ordinarily appears immediately following the name itself. The entire State has been arbitrarily divided into 35 such "quadrangles" whose boundaries are the parallels of latitude and the meridians of longitude, expressed in units of one degree. The quadrangles are numbered 1 to 35; their locations are shown on the accompanying map.

2. The areas covered by certain of the topographic sheets published by the United States Geological Survey coincide exactly with the corresponding quadrangles as we have delimited them. In these cases it has been possible to locate points within an area one-sixteenth that of our numbered quadrangles, as the topographic

MAP OF THE STATE OF NEVADA
One inch = about 53 miles

sheets are divided into units measured in 15 minute intervals of longitude and latitude. These smaller rectangles have been lettered (in the present list) a to p; their relative positions are shown on the map. The letters designating the rectangles appear in the index immediately following the quadrangle numbers and separated from them by a hyphen. An example follows:

Granite Springs Wash 8-a,e,i

This is taken to mean that Granite Springs Wash lies in quadrangle 8 (that is, between 40° and 41° N. lat. and between 118° and 119° W. long.), and, moreover, that it extends from rectangle a (in the northwestern corner of the quadrangle) through rectangle e to rectangle i.

It should be pointed out here that wherever, as in the above example, two or more numbers or letters of the same category appear together, separated by commas, the place or region to which they refer is understood to be situated partly in each, or to extend from one to the other.

3. The county, when known, is given. We have attempted to locate every place according to the county boundaries now prevailing (January 1, 1941). There are, however, two principal factors which may have led to errors in this work, so that in doubtful cases, where a point lies near the boundary between two counties, its position should be carefully checked. First, county boundaries in Nevada have been repeatedly shifted, county names have been changed and new counties have been created from old. The last

major change in county lines has been made since 1930. Secondly, the early surveys of Nevada were inaccurate, particularly in regard to longitude. On some of the early maps major topographic features were misplaced as much as a whole degree. We have had to locate some of the places on maps of this sort by comparing their positions with those of recognizable localities on modern maps, which is necessarily an undependable method.

The abbreviations for county names appear in parentheses, immediately following the quadrangle and rectangle symbols. The abbreviations in question are as follows:

Churchill (CH)	Humboldt (HUM)	Ormsby (ORM)
Clark (CL)	Lander (LAN)	Pershing (PER)
Douglas (DOUG)	Lincoln (LIN)	Storey (STOR)
Elko (ELKO)	Lyon (LY)	Washoe (W)
Esmeralda (ESM)	Mineral (MIN)	White Pine (WP)
Eureka (EUR)	Nye (NYE)	

4. We have indicated, by the use of Roman numerals, the map or maps from which our data have been taken. A list of the maps indexed is appended. We have also indicated, by underlining, the names which appear on the General Land Office map of the State of Nevada, published by the United States Department of the Interior (1930), to which we have not given a number. This seems to us to be the best all-purpose map of the State which is now generally available, and we have accordingly used it as a standard and made a number of cross-references to it. (A new edition of this map is

in preparation, but at the time of writing it was unavailable.) For an example of a cross-reference to the Land Office map, the following may be given: The notation "Bigler L. (= Tahoe L.)" indicates that Bigler L., which appears on Map XVIII of our series, is identical with Tahoe L. of the Land Office map. The equality sign is used always as a means of reference to the Land Office map; its presence in our list, preceding a name in parentheses, shows that the name in question appears on that map. Cross references to names not on this map are in parentheses without this sign.

5. Where there is a considerable duplication of names or where, for some other reason, there is any ambiguity about a particular locality, we have located it by giving the Township and Range numbers, based on the Mt. Diablo Meridian and the Mt. Diablo Base Line. The numbers have been placed in parentheses; when present they follow the name of the locality, and precede the quadrangle and rectangle symbols. In order to conserve space we have omitted the conventional "T" and "R" which ordinarily precede the numbers. An example of the use of these numbers follows:

Cottonwood Cr. (29 N, 54,55 E) 11 (ELKO)
Cottonwood Cr. (29 N, 55 E) 11 (ELKO) LXXII
Cottonwood Cr. (30 N, 56,57 E) 11 (ELKO) XLII

A considerable problem in Nevada arises from the repetition of certain names. Cottonwood Creek, for example, appears in the index no fewer than 37 times, and Willow Creek appears 31 times. This repetition is unfortunate but unavoidable, and we have tried to include as many of the repetitious names as possible, perhaps erring

on the side of including too many. The same thing is true for unnamed alkali flats, alkali lakes, hot springs, buttes, lakes, and ponds which occur on all maps. The chief features of this kind were indexed for the principal maps examined early in the project, but the number of names became excessive and the practice of indexing them was discontinued as there was no means of establishing their identity.

6. Supplementary information, if any, is given in parentheses immediately following the place-name. This includes such information as the heights of mountains or peaks, or certain explanatory material regarding location. Other information, relative to botanical collections or to the nature of the locality, will be found in parentheses following the Roman numerals referring to the maps. The following are examples of the use of supplementary information:

Gold Mt. (7400 ft.) 26 (ESM) II, V

Gold Mountain Pk. 26 (ESM) XC (apparently different from Gold Mt.)

Gouge Eye 3 (HUM) XXV (town)

Gypsum cave (18 mi. n. of Las Vegas) 33 (CL) (appears on P. Train's specimens).

We have attempted to distinguish between towns or settlements named for natural features, and the natural features themselves. This has been done by abbreviation wherever possible. Twin River (a river), for example, appears in the list as Twin R., while Twin River (a settlement or town) appears in full. Where this method

seemed clumsy or otherwise inadvisable, we have inserted explanatory words like (town), (valley) or (triang. sta.). Following is a complete list of abbreviations, with the exception of those which appeared on some of the maps, to whose meanings we have no positive clue. Examples of this sort are "Br.", which may mean "bridge," "brook," or "branch," and "Gul.," which probably always means "gulch" but may mean "gulf" or "gully."

A.S. . . . . Administrative Site	Nat.For. . . . . National Forest
Can. . . . . Canyon	Pk. . . . . Peak
Cr. . . . . Creek	Pt. . . . . Point
Dist. . . . District or Mining District	R. . . . . River
G.S. . . . . Guard Station	Rd. . . . . Road
I. . . . . Island	Res. . . . . Reservoir
Ind. Res. . Indian Reservation	R.S. . . . . Ranger Station
Jct. . . . . Junction	Sch. . . . . School
L. . . . . Lake	Spr. . . . . Spring
Mt. . . . . Mountain	Sta. . . . . Station
	Triang. Sta. . . Triangulation Station

The maps examined are listed below. The order does not follow any particular system but is simply that in which the maps came to our attention.

Unnumbered State of Nevada. U. S. Dept. of the Interior. General Land Office. Edition of 1930.

I Post Route Map of the States of California and Nevada. Publ. by order of the Postmaster General (about 1920).

XCIX Geographical Explorations and Surveys West of the 100th Meridian. Parts of E. California, S.E. Nevada, N.W. Arizona and S.W. Utah. Atlas Sheet No. 66. (Wheeler Expeditions 1869-1872, 1873).

C 1938 Road Map, Nevada. Standard Oil Company of California. (H. M. Goushá). 1938.

CI State of Nevada. Nevada Division, California State Automobile Association. 1936.

Part III. Alphabetical List of Names.

Abandoned Well 34-f (CL) XLVI

Abbotsford (20 mi. w. of Pioche) 29 ? (LIN)

Abbotts Spr. 17 (WP) LXXXVII

Accident Mine 34 (CL) L

Acenith (mine) 21 (NYE) LX

Ackerman Can. 16-f (LAN) XXXV

Ackerman Spr. 16-i (LAN) XXXV

Ackler Cr. 5, 11 (ELKO) LXXII

Ackler Cr. 11 (ELKO) XL

Ackler Cr., south fork 5, 11 (ELKO) LXXII

Acme 20 (MIN) II, XXV

Acme Tank 20-g (MIN) LIII

Acoma 29 (LIN) I, II, XXV

Acton 33 (CL) II, XXV

Ada Hill 18 (WP) XIII

Adam Pk. (8651 ft.) 3 (HUM) XXI

Adams 23 (NYE) LXIX

Adams Spr. (e. side of Mt. Irish) 28 (LIN)

Ada Shaft 18 (WP) LXII

Addison Mine 34 (CL) L

Adelaide 9 (HUM) XXV

Adobe City 8 (PER) LXXXVII

Adobe Flat 8 (PER)

Adobe Valley (s. of Excelsior Mts.) 20 (MIN) V

A. Drowns Ranch 11 (ELKO) LXXII

Adverse 18 (WP) II, LXIX

Aerial Ferry (w. bank of Colorado R.) 33 or 35 (CL)

Aerial Ferry Gulch 33 or 35 (CL)

Afton 5 (ELKO) I, II

Agate Hill 21 (NYE) LXXXVII

Agate Pass 10 (EUR) LXXXVII

Agate Pk. 2 (HUM) LXXIV

Agate Pt. 2-c (HUM) XI

Agates 15 (CH) LXXXVIII

Ahles 15 (LAN) XCIV

Aiken Cr. 15 (NYE) LXX

Air Beacon Knoll (4 mi. w. of Wendover, Utah) 12 (ELKO)

Air Beacon Pass (3 mi. w. of Wendover, Utah) 12 (ELKO)

Airport (on Charles Sheldon Big Game Refuge) 1 (W)

Airy Pk. 15 (LAN) XCIV (= Mt. Airy)

Akbar 6 (ELKO) LXXIV

Alabama Dist. 9 (LAN ?) VIII

Alabama Dist. 9 (PER) LXXXVII

Alamo 28 (LIN) I, II

Alan's 14 (CH) XCIII, XC

Alazon 5 (ELKO) II, XXV

Alcatraz Island 26 (ESM) LI

Alder Cr. 2-a,e,f (HUM) XI

Alder Mt. (7680 ft.) 5 (ELKO) LXXIII

Alhambra 13 (LY) LXXXIV

Alice Gendron Cr. 15 (NYE) LXX

Alice Mine 34 (CL) L

Alida Dist. 26 (ESM) XCI

Alida Spr(s). 26 (ESM) V, XC

Alida Valley 26 (ESM) LXXXVII

Alkali (Alkali area ?) 2 (HUM) II

Alkali 19 (LY) LXVI

Alkali 25 (ESM) VIII

Alkali Desert 10, 11, 16, 17 (EUR) II

Alkali flat (46 N, 28 E) 2 (HUM)

Alkali flat (42, 43 N, 32, 33, 34 E) 2 (HUM)

Alkali flat (26 N, 18, 19 E) 7 (W)

Alkali flat (34 N, 23, 24 E) 7 (W, PER)

Alkali flat (26, 27, 28, 29 N, 35, 36 E) 8, 9 (PER) I

Alkali flat (29, 30 N, 41 E) 9 (PER, LAN)

Alkali flat (28, 29 N, 48 E) 10 (EUR) II

Alkali flat (17 N, 23 E) 13 (LY) II

Alkali flat (16, 17 N, 26 E) 13 (LY)

Alkali flat (s.w. of Pyramid L.) 13 (W) VIII

Alkali flat (s.e. of Hot Springs Mts.) 14 (CH) II

Alkali flat (s. of Carson L.) 14 (CH)

Alkali flat (20, 21, 22 N, 55, 56 E) 17 (WP) I, II

Alkali flat (12, 13 N, 23, 24 E) 19 (LY) II

Alkali flat (12, 13 N, 33, 34 E) 20 (MIN, NYE) II

Alkali flat (6 N, 35 E) 20 (MIN)

Alkali flat (7, 8 N, 34 E) 20 (MIN)

Alkali flat (13, 14 N, 43, 44 E) 15, 21 (NYE) I, II

Alkali flat (8 N, 42 E) 21 (NYE)

Alkali flat (12 N, 43 E) 21 (NYE)

Alkali flat 21, 26 (ESM)

Alkali flat 22 (NYE) VIII

Alkali flat 23 (NYE, LIN ?) VIII

Alkali L. 1-e (W) I, II, IX

Alkali L. (n. of Pine Forest Range) 2 (HUM) II, XVII (= Alkali flat, 47 N, 28 E)

Alkali L. 7 (W, HUM) I; 7 (W, PER) II

Alkali L. 9 (LAN) II

Alkali L. 9 (PER) I

Alkali L. 14 (CH) I

Alkali L. (10 N, 22 E) 19 (DOUG)

Alkali Land 16 (LAN) III

Alkaline Spr. (near McLeans of II ?) 21 (ESM) V
